

Your eyes cannot see the difference between any two things!

Your eyes cannot see the difference between any two things! Why? Consider two objects 'x' and 'y'. **The difference between 'x' and 'y' is neither in 'x' nor in 'y', but in between 'x' and 'y'.** Your eye can see 'x' and 'y' separately, but it cannot see the difference between 'x' and 'y' which is neither in 'x' nor in 'y'! How one resolves the difference between 'x' and 'y' is yet to be resolved by the science of biology. Oh, no, it is the biology of logic!

The difference between gun and rose is neither in gun nor in rose, but in between gun and rose.
